Can you get it up and running?

Yes.

Is anything problematic? Are there steps missing or assumptions made?

No.

Does the implementation and diagrams conform (do they show the same thing)?

Yes.

Are there any missing relations?

No.

Relations in the wrong direction? Wrong relations?

Not what i can see.

Correct UML notation?

I belive so.

Is the Architecture ok?

I belive so.

Is there a model view separation?

Yes there is.

Is the requirement of a unique member id correctly done?

Yes it is.

What is the quality of the implementation/source code?

Good naming. It was not the easiest to understand how the application worked altho got the hang of it after a little while. No real duplication of code and can't find any dead code.

What is the quality of the design? Is it Object Oriented?

Objects are connected using associations and not with keys/ids.
Don't think that the classes were too large or having to much responsibility.

As a developer would the diagrams help you and why/why not?

Yes the diagrams help me move better throght the code.

What are the strong points of the design/implementation, what do you think is really good and why?

Both the design and implementation were easy to read after i got the hang of it. Good naming of functions.

What are the weaknesses of the design/implementation, what do you think should be changed and why?

A lot of controllers, mabey would bo easier with less controllers atleast in such a small project.

Do you think the design/implementation has passed the grade 2 criteria?

Yes.
